

Secap offers a breakthrough opportunity for dealers to offer the most advanced, full line digital mailing systems in the market. Contact Secap today to learn about this tremendous offer. Call 800-523-0320.

Low Volume Digital Meters

DP100™ Mailing System: With its small footprint, this semi-automatic ink-jet system offers a unique solution to customers who process up to 400 or less pieces per month. Features an integrated (built-in) weighing platform. Process up to 30ppm.

DP200™ Mailing System: Provides semi-automatic envelope feeding functionality to the small office and very small mail rooms. This compact system offers customers a range of exclusive mail services and IntelliLink® Technology. Process up to 40ppm.

DP300™ Mailing System: Provides semiautomatic envelope transport — capable of handling mail of various sizes. Customers can save time and space with such new features as the integrated weighing platform. Plus, the system is whisper-quiet, which is perfect for the office environment. Process up to 65ppm.

The DP400™ Mailing System: Provides automatic envelope feeding functionality to the small business user. It's a solution that combines streamlined performance, solid design, and easy operation, making it the perfect choice to improve productivity in multiple user environments. Process up to 95ppm.

Mid Volume Digital Meters

DP475™ Mailing System: Redefines the standard for productivity in a mid-volume mailing solution. WOW is standard on all DP475's for businesses that need in-line weighing and rating to process mixed weight and sized mail. The DP475 has an easy to read, crisp clear backlit color display and proven quality and reliability. Process up to 120 ppm (non WOW) and 80 ppm with WOW.

DP525™ Mailing System: This system delivers new levels of simplicity and productivity by automatically feeding, sealing, and imprinting postage at up to 150 ppm. You can also get this system with the industry standard in productivity, Weigh-on-the-Way™ (WOW™) process up to 65 ppm with WOW. The system handles varying sizes from postcards to 10" x 13"

Mid Volume Digital Meters

DP575™ Mailing System: This system gets the job done quickly and efficiently by automatically feeding, sealing, and imprinting postage at up to 175 ppm. It can feed various sizes of mail up to 5/8" thick. You can also get this system with the industry standard in productivity, Weigh-on-the-Way™ (WOW™) process up to 95 ppm with WOW .

The DP825™ Mailing System: A productive and durable system with a small footprint that is great for mailers with higher volume mailings. Customers have the option of Weigh on-the-Way™ (WOW™) technology, or a non-WOW version. With the non-WOW processing up to 200 ppm and the WOW processing up to 100 ppm, these mailers process consistent volumes and often process longer runs of "same size" mail.

DP875™ Mailing System: Similar to the DP825. Customers have the option of Weigh-on-the-Way™ (WOW™) technology, or a non-WOW version. With the non-WOW processing up to 230 ppm and the WOW processing up to 115 ppm, these mailers process consistent volumes and often process longer runs of "same size" mail.

High Volume Digital Meters

DP1100™ Mailing System: The ultimate high-volume mailing system. There is nothing in the market like it today! Along with the easy-to-use IntelliLink® Control Center, it provides versatility, productivity, durability, and reliability! Its versatility is best demonstrated by giving mail centers the capability to auto-mate 100% of processing functions with the best technology available. The DP1100™ is a high production system, processing mail without the need to sort it by weight, thickness, or size. Process up to 295ppm (non WOW) and 145ppm (WOW).
